

Morgan Anunda

(667) 487-4013 | manunda1@jh.edu | [LinkedIn](#) | [GitHub](#)

EDUCATION

Johns Hopkins University

Bachelor of Science in Computer Science

Baltimore, MD

August 2025- May 2029

- Relevant Coursework: Causal Inference, Gateway Computing: Python, Visual Cognition.
- Activities: Brain-Computer Interface Society, Taekwondo, Wall Street Internship Academy, NSBE (Freshmen representative), Black Male Initiative Scholar.

EXPERIENCE

MACHINE LEARNING / DATA SCIENCE / NEUROSCIENCE

Self-Tutelage

Kenya

November 2023 - Present

- Learned and applied Python in performing ML workflows on 5+ projects.
- Predicted stroke risk by leveraging patient data focusing on recall (87%), predicted house prices and performed image classification with CNN architecture w/ ~73% accuracy.
- Modelled neuron-spike simulation via Leaky Integrate-and-Fire model.

ASSISTIVEMATH

Applied ML/AI Intern

Nairobi, Kenya

June 2025 - August 2025

- Bridged AI and accessibility by applying LLMs and CV techniques to make mathematical education more inclusive for visually impaired learners; integrated scikit-image's SSIM for frame-level analysis, reducing computer vision module setup time by 90%.
- Collaborated on Supabase data layer in improving reliability and scalability of YouTube video metadata ingestion and ETL into Azure analytics pipelines processing 1K+ records with 99.9% job success.
- Built and deployed a 4-stage asynchronous FastAPI pipeline with real-time 1-second progress updates, enabling reliable concurrent conversions in a B-Corp-aligned environment.

BUILDING-U

Data and Marketing Analyst

NL, Canada

April 2024 - June 2024

- Executed analysis and visualization of data from various ad campaigns, adjusting bids to stay competitive within a budget of \$10K/month.
- Tracked keywords and presented weekly reports to the Director of Growth.

KAPSABET HIGH SCHOOL

Web Developer

Kapsabet, Kenya

January 2023 - July 2023

- Co-developed and designed school's website from WordPress, HTML & CSS.

PROJECTS

CREATIVE PROJECT

Menace: Reinforcement Learning with Tic-Tac-Toe | OOP, Game AI

Nairobi, Kenya

July 2025 - September 2025

- Engineered game engine and self-learning AI in Python for Tic-Tac-Toe based on Donald Michie's 1960s MENACE.
- Implemented a RL algorithm from scratch, representing game state and bead-based learning system using Python data structures.
- Authored a suite of 5 unit tests using unittest framework to ensure correctness of game logic, win/loss conditions, and the AI's learning mechanism.

LEADERSHIP EXPERIENCE

FOR A SMILE'S SAKE

Advisory Board Member

Kenya

August 2024 - Present

- Advising on philanthropy and youth empowerment initiatives serving 2K+ beneficiaries.
- Guided launch of a high school chapter and volunteer network across 7 regions in Kenya, Uganda & Diaspora; supporting health, education & resource mobilization programs for vulnerable groups.

TECHNICAL SKILLS

Languages: Python, Java, C, HTML & CSS, JavaScript, C++, SQL, Vue.js

Developer Tools / Libraries: Git, GitHub, Azure, VS Code, Google Colab, Excel, pandas, NumPy, Matplotlib, PyTorch, TensorFlow
